

TM

Our tactical throat microphone has created a new standard in price, performance and comfort for demanding law enforcement, fire, industrial and other task critical or high noise communication applications.

The TM is one of the most versatile economical audio accessories yet devised. It has been effectively used in activities requiring breathing protection including SCBA's, gas masks, hazmat, plastic suit and confined space. It is also effective to talk and listen in noisy areas. Perfect for police tactical units and firefighters. Included with our rugged use throat mic kit is a molded plastic neck mic with adjustable water sealed rubber cover, dual mic elements, clear acoustic ear tube, large round detachable tactical PTT switch and a radio connector cord. The throat mic is designed to fit necks 12 to 17 inches in size.

TKLSA

Our lightweight behind-head support headset with N/C micro-flex boom mic and ear speaker. Hard hat/helmet compatible.

TTC

The Cobalt TTC bone conduction headset with dual bone conduction temple speakers features a behind head support headset and directional noise reduction boom mic.

The TTC headset uses speakers that transmit audio directly into the user's skull, using advanced bone conduction technology. Dual speakers do not block the user's ears, allowing the user to hear what is going on around (situational awareness). The noise canceling mic is mounted on an adjustable flex boom to place the mic where needed. Dual-Bone Conduction temple speakers transmit audio directly from vibrations into the user's skull. Adjustable wrap-around style headset secures behind the user's head. Over-the-head, adjustable strap holds headset firmly in-place. Unique Bone Conduction speakers leave the user's ears uncovered so the user can hear incoming radio transmissions and environmental sounds. Or use standard issue hearing protection ear plugs required for your work and hear communications without needing a large muff headset.
